

SUPPLEMENTARY FIGURE

Supplementary Figure 1. Distribution of mean telomeric spot intensity per nucleus in lung tissue sections from controls and from COVID-19 patients. (A, B) Box and Whisker plot representation of mean telomeric spot intensity per nucleus in alveolar type II cells (AT2) pro-SPC positive (A) and in non-AT2 cells pro-SPC negative (B) in lung sections of control and COVID-19 patients. The ends of the box are the upper and lower quartiles so that the box spans the interquartile range. The middle line represents the median and bars the standard deviation.
